

NSBRC Drop In Clinic: Rainwater Harvesting & Water Conservation

Saturday 27th September | 10am - 2pm

Presentation Timetable (All talks will take place in the Sustainability Theatre)

10:00 – 10:25 | Rainwater Harvesting | TV144

Discover the Many Advantages of Installing a Rainwater Harvesting System

Rainwater from the roof can be used instead of drinking quality water to flush toilets, washing machines and outside in the garden, this can save nearly 50% of treated mains water. Learn how a rainwater harvesting would be a useful addition to your project.

11:00 – 11:25 | Halcyan | TV 180

The greatest energy saving device you've never thought of

How to save energy and 0.5 tonne carbon every year, from your hot water system! Save energy and protect the equipment and systems in your new home or extension, with sustainable water treatment.

12:00 – 12:25 | Rainclear Systems | TV 15, 18 and The Dale House, Gable End

Liquid gold: making your gutter pay rent

This talk will look at different options for harvesting rainwater from gutters,. Rainclear offer rainwater collectors in all of their guttering ranges. They are easy to install and can be retrofitted. They are clever in their simplicity and have a feature that prevents over-flowing in water butts.

13:00 – 13:25 | Rainwater Harvesting | TV144

Rainwater Harvesting at The Planning Stage

Rainwater collection is the top priority in the recently published National Drainage Standards as a SuDS solution. Rainwater can also make a significant contribution to Water Efficiency Calculations and Part G of Building Regulations making it a sustainable solution in planning applications.
